

# One Step Fire Inspection Software

## *Features and Benefits*

### **Software**

- Intuitive interface that allows the user to rearrange columns, apply filters, and sort
- Flexibility that meets your departments business rules and processes
- Integration versatility with various records management systems (i.e. FDM, Logics, FireRMS)
- Software runs on tablets PC's, laptops, and Pocket PC's
- Ability to use software in conjunction with wireless printers to allow for quick and efficient printing in the field
- Plug-in technology allows for easy and simple upgrades
- Save data entry time by automatically uploading information at any time to the database via docking station or remotely
- Allows the user to attach various files, photos, tables from Fire Codes, or documents associated with an occupancy or inspection

### **Inspections**

- User definable drop down lists such as inspection types, construction types, occupancy types, fire codes, etc.
- Ability to perform ad hoc inspections in the field
- Access fire codes by section and description while in the field
- Track a definitive start and stop time of an inspection as well as hours spent on an inspection
- Sort inspections by various criteria
- Ability to modify or add occupancy information in the field
- Ability to maintain and track systems such as sprinklers, detectors or other fire prevention equipment. Collect third party maintenance contractor information for each suppression system
- Location fields allow for tracking items such as key boxes, etc.
- Capture occupant signature on-screen
- Multiple user definable methods of contact for each occupancy contact person (i.e. phone, fax, cell, email, pager, etc.)
- Option of printing and/or emailing field reports to the occupant
- Ability to insert payment date and reference number for billing purposes
- Full address information for each contact within an occupancy
- Occupancy status allowing you to record things such as active, vacant, condemned, etc.
- Record reason for inspection (i.e. annual, complaint, follow up, etc.)
- Street name "quick" pick list for efficiency and simplicity
- Tracking of agency referrals

# One Step Fire Inspection Software

## *Features and Benefits continued...*

### **Scheduling**

- Automatic scheduling and re-scheduling (i.e. monthly, yearly) based on your departments criteria
- Allows the “user” to define rules for re-inspection schedules based on *various* criteria (i.e. inspection type, occupancy type, etc)

### **Hazmat**

- The ability to track type, quantity, unit and location of hazardous materials
- Hazmat reports such as hazmat by occupancy or all material types in a district can be produced

### **Violations**

- Violation severity can be assigned to violations, recommendations, or other user definable criteria
- Violation locations can be tracked and recorded for an occupancy to allow for more timely and efficient re-inspections

### **Reports**

- Dynamic reporting system that creates reports based on information within the system
- Flexible reports using either general or specific selection criteria (i.e. all inspections for a specific occupancy type within a determined date range)

### **Pre-Plan (*optional module*)**

- Ability to create and edit floor plans or pre-plan diagrams during an inspection
- NFPA symbols inserted into floor plans

### *Training and Support*

- Pre-implementation analysis performed to meet your departments unique needs
- On going support via email, telephone, VPN, or on-site
- On-site installation
- On-site training set up as a classroom type tutorial
- In field training also available

### *The Benefits Include....*

**A cost effective solution that increases the number of inspections completed, more accurate data collection, ease of reporting, and greater public safety.**
